

Junior Product Manager Biomaterials (m/f/d)

bone & tissue
regeneration

botiss
biomaterials

botiss is a fast growing, successful bio-medical company, headquartered in Berlin with global activities. We develop, manufacture, and market innovative biological products for tissue regeneration in the dental field. Market activities in over 100 countries require global thinking and action. Our clinical product portfolio requires a thorough understanding of scientific topics and clinical context

To support our product management team we are looking for a Junior Product Manager Biomaterials (m/f/d) for a permanent position.

Your tasks:

- Development of indications and clinical documentation in cooperation with clinical users
- Development of marketing concepts and product positioning
- Conception and creation of product and marketing documents and clinical case studies
- Support in the preparation of documents relevant for registration
- Advising and collaborating with clinical users and sales partners

Your qualifications:

- Completed scientific studies (University / FH)
- Work or internship experience in a clinical environment or product management or sales is an advantage
- Very good written and spoken English and French, good German knowledge and other foreign languages are of advantage
- Strong willingness to travel internationally, presentation skills, ability to work in a team, high level of commitment

We offer:

- Responsible, challenging and interesting tasks and projects
- Work in an international environment in a very collegial, motivated and committed team
- The opportunity to develop personally and contribute your own ideas and strengths
- Extensive employee benefits (e.g. fruit basket, gym, employee discounts)

If we have aroused your interest, please send us your application documents electronically stating your desired salary and earliest starting date.

Your contact person is Dr. Christiane Marinc (jobs@botiss.com)
